Instructions for outside client's to order Seattle Children's

Dried Blood Spot Testing for Immunosuppressants

Dried Blood Spot (DBS) testing is now available for three immunosuppressants: Everolimus, Sirolimus, and Tacrolimus. The dried blood spots are collected by families or outside care providers and sent to Seattle Children's Chemistry Lab for testing.

Blood spot cards, requisitions, and postage-paidpreaddressed envelopes will be provided to you by Seattle Children's Laboratory.
Please allow for 2 weeks for materials to arrive.

Other collection items will need to be acquired by the outside client: lancets, alcohol swabs, sandwich bags, and band-aids.

To request more materials, contact Laboratory Client Services at 206-987-2617.

Testing information can be found on the online test guide, LabMan:
